NAME
rabsonlib_sleftshift – shift a string to the left

SYNOPSIS
cc -c -I/home/5156/rabsonlib ...
cc -o ... -L/home/5156/rabsonlib -lrabson

#include <rabsonlib.h>

char *rabsonlib_sleftshift(char *, int n);

DESCRIPTION
Shift the string s to the left by n characters (must be positive). No characters are shifted to bytes before the
beginning of the string; thus, n characters are lost, and the string becomes shorter. However, if n is greater
than the string length, the call has no effect. The beginning of the string s is returned.
